

CLAIMS

What is claimed is:

1. A caulk tube extension comprising:
 - 5 an elongated cylindrical tube constructed of a substantially rigid material and having an open attaching end and an open dispensing end, the open attaching end containing a means for removable attachment to the spout of a caulk canister for receiving caulking compound therefrom, and the tube containing a first segment and a second segment, where the first segment extends from the open attaching end, and the second segment is
 - 10 integrally attached to the first segment and extends to the open dispensing end, and the longitudinal axis of the first segment is oriented at an angle to the longitudinal axis of the second segment.
2. The caulk tube extension of claim 1, wherein the means for attachment is a plurality of male threads disposed circumferentially in the interior of the open attaching end, the
- 15 threads being constructed from a relatively high density polyethylene, and the exterior of the open attaching end containing a hex nut integrally connected to and disposed around its circumference.
3. The caulk tube extension of claim 1, wherein the angle is 45 degrees.
